

## **Acknowledgements**

We would like to thank Dr David Errickson for his thoughtful comments on this paper, and technical assistance throughout this study. In addition, the anonymous reviewers provided very useful feedback.

This research presents a new method for the recovery of footwear impressions from the crime scene by using a 3D structured light scanner. We test the ability of this method for carrying out digital comparisons between recovered impressions and suspected items of footwear. The key benefits of this method are that it is non-invasive, fast and repeatable, unlike the current method of casting which destroys the evidence.
